- Precise spectrum measurement.
- Frequency stabilization and locking.

1. **Doppler broadening and saturated absorption.**
2. **Apparatus and measurement.**
3. **Data and result.**
4. **Conclusion.**

Doppler broadening and spectral hole burning.

- Natural line width.
- Doppler broadening.

$$\Delta f = \frac{v}{c} f_0 \approx 100MHz$$

- Cooling.
- He-Ne spectral whole burning discovered by Bennett in 1962.
- Saturated absorption in vapor cell.

- Saturated absorption in vapor cell.

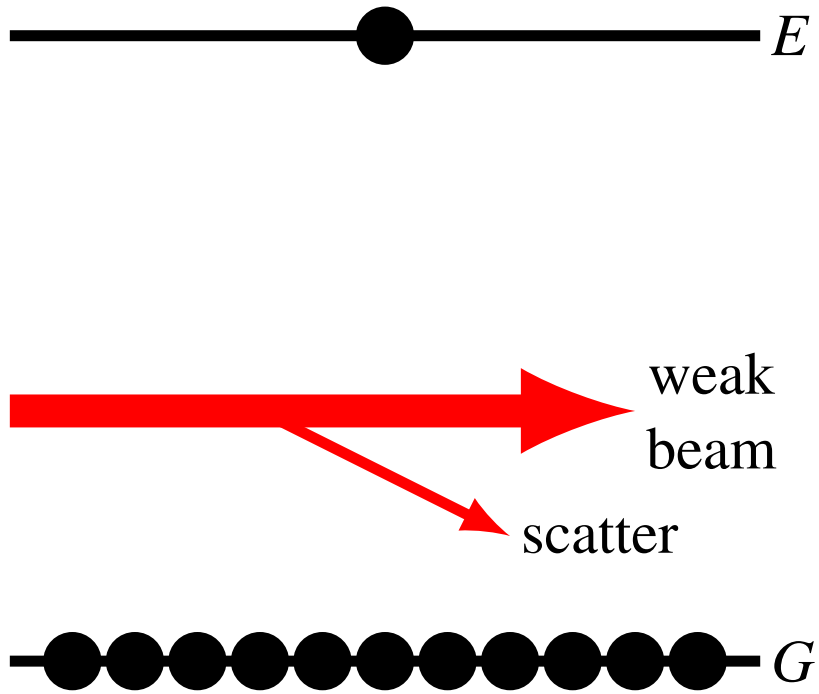
Saturated absorption.

- Saturation intensity.
- Saturate absorption with two beams and Lamb dip.
- Crossover peaks.



Saturated absorption.

- Saturation intensity.
- Saturate absorption with two beams and Lamb dip.
- Crossover peaks.

Measurement

Hyperfine structure of Rubidium D_2 line.

- D_2 line
  $5^2S_{1/2} \rightarrow 5^2P_{3/2}$
- 2 "doppler distinguishable" "ground states", each couples with 3 non-"doppler distinguishable" excited states.
- $$\Delta E_{hfs} = \frac{1}{2} A_{hfs} K + B_{hfs} \frac{3K(K+1) - 2I(I+1)J(J+1)}{8I(2I-1)J(2J-1)}$$
  $$K = F(F+1) - I(I+1) - J(J+1)$$
- Quantities to measure
  $A_{5^2S_{1/2}}$, $A_{5^2P_{3/2}}$ and $B_{5^2P_{3/2}}$ for ^{85}Rb and ^{87}Rb.

Hyperfine structure of Rubidium D_2 line.

$$K = F(F+1) - I(I+1) - J(J+1)$$

- Quantities to measure
  $A_{5^2S_{1/2}}$, $A_{5^2P_{3/2}}$ and $B_{5^2P_{3/2}}$ for ^{85}Rb and ^{87}Rb.

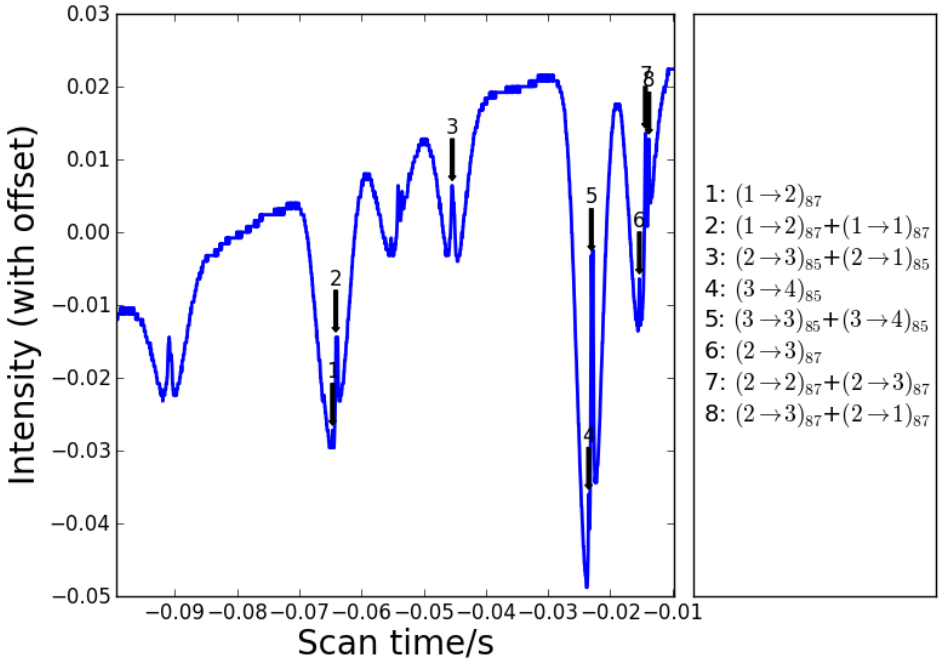
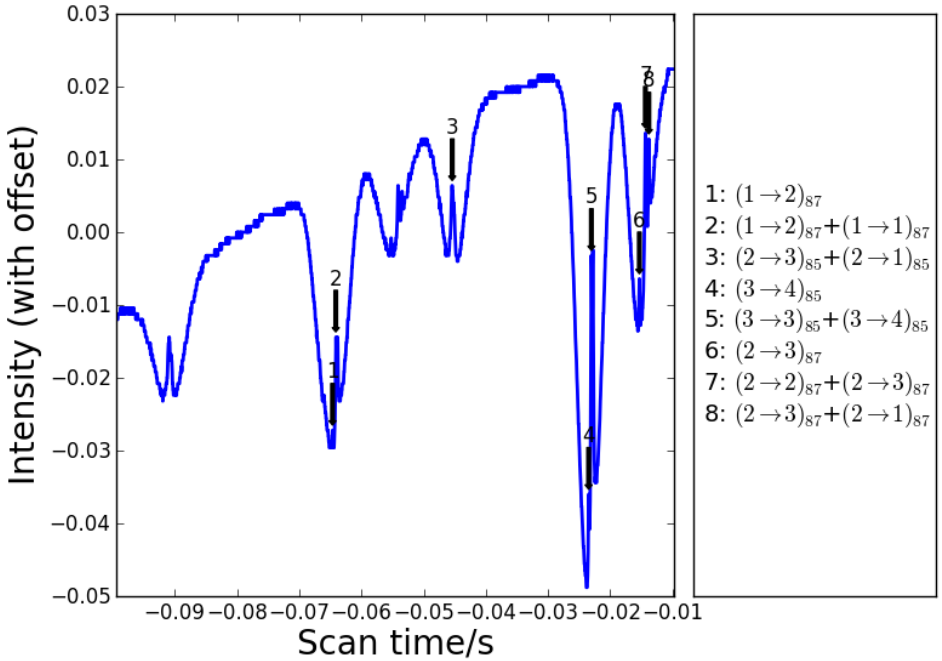
Spectrum measurment.

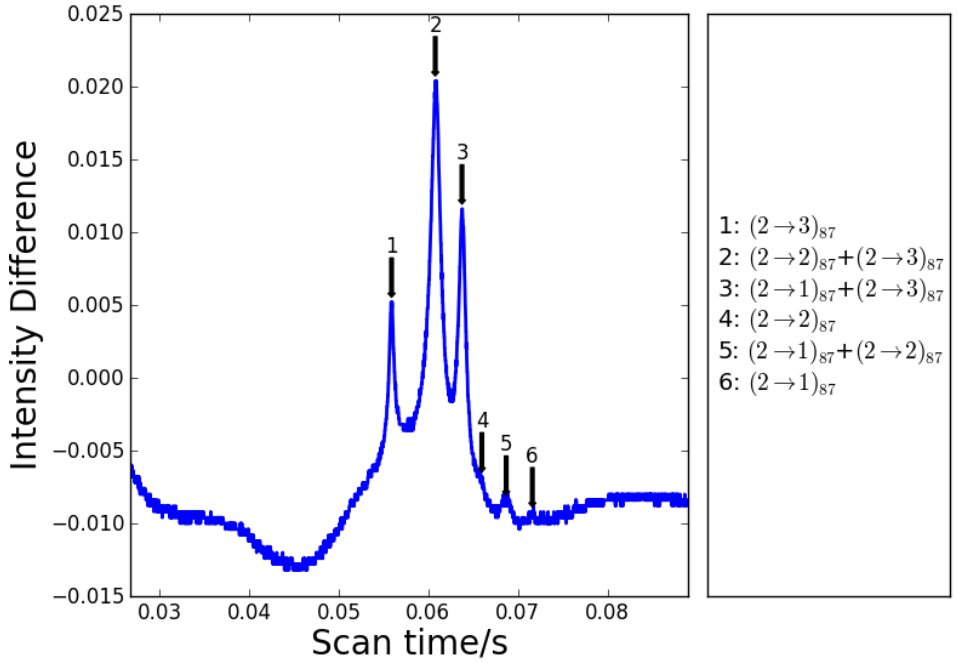


Probe beam intensity of the whole scan.

Spectrum measurment.



Probe beam intensity of the whole scan.



Difference between probe and reference beam intensity of the ^{87}Rb $F = 2$ lines.

Hyperfine Structure Constants.

Isotrope	Constant	Measured	Expected	Deviation
^{85}Rb	$A_{5^2S_{1/2}}$	$0.986(40)GHz$	$1.0119GHz$	0.6σ
	$A_{5^2P_{3/2}}$	$24.44(81)MHz$	$25.0020(99)MHz$	0.7σ
	$B_{5^2P_{3/2}}$	$32.2(4.8)MHz$	$25.790(93)MHz$	1.3σ
^{87}Rb	$A_{5^2S_{1/2}}$	$3.285(65)GHz$	$3.4173GHz$	2σ
	$A_{5^2P_{3/2}}$	$84.58(52)MHz$	$84.7185(20)MHz$	0.2σ
	$B_{5^2P_{3/2}}$	$16.03(80)MHz$	$12.4965(37)MHz$	4σ

Conclusion.

- Observed Lamb dip.
- Measured hyperfine splitting and the hyperfine structure constants.

Conclusion.

- Observed Lamb dip.
- Measured hyperfine splitting and the hyperfine structure constants.
